

# LP AUDIT

The **LP Audit** is a full featured lock with multiple users and audit trail.

## APPLICATIONS

- ⊕ Commercial safes
- ⊕ Bank safes
- ⊕ Automatic teller machines (ATMs)
- ⊕ Vaults
- ⊕ Till skimmers
- ⊕ Service stations
- ⊕ Retail chains
- ⊕ Fast food
- ⊕ Drug cabinets
- ⊕ Bars and clubs
- ⊕ Hotels

## OPTIONS, VARIATIONS AND ACCESSORIES

- ⊕ Available in deadbolt, swing bolt and spring bolt.
- ⊕ Extra large battery pack to extend to 29,000 openings.
- ⊕ Redundant lock option.
- ⊕ The bolt can be monitored with a micro switch, which can also be formed in a circuit to monitor the door. If remote monitoring is required connection to an alarm panel would be required.
- ⊕ Alarm box for interface to alarm system.
- ⊕ LP/LG Audit Kit.

# LP AUDIT

## STANDARD FEATURES

- ⊕ Easy to use and reliable.
- ⊕ Push button access. 6 to 9 digit combination gives up to 1,000,000 possible permutations.
- ⊕ Wrong try penalty means that attempting to guess the combination more than 4 times will render the lock inactive for a period of 5 minutes.
- ⊕ Polyfuse provides unique protection to the lock by protecting it against electric shock attacks.
- ⊕ The battery resides in the input pad for easy changeover. The lock will retain all settings when changing the battery.
- ⊕ Operates on a Duracell 9V alkaline battery which gives up to 2560 openings. Low battery level triggers an audible warning.
- ⊕ Unlike mechanical locks, codes are easy to change and therefore do not require a locksmith.
- ⊕ Keypad gives audio and visual signal for ease of use.
- ⊕ Environmentally tested from -10°C to 85°C
- ⊕ All vital components are located within the lock body for maximum security.
- ⊕ Operates on a Duracell 9V alkaline battery which gives up to 2560 openings. Low battery level triggers an audible warning.
- ⊕ The lock will retain all programmed settings when changing the battery.
- ⊕ The swing bolt version has a patented automatic locking mechanism which locks when safe handle is turned.
- ⊕ Certified to both Group 1 Underwriters Laboratory (UL) and European VDS KL2 manipulation proof rating. Please contact us for other approvals.
- ⊕ Can be retrofitted in place of mechanical locks and key locks.

## PLUS SPECIAL LP AUDIT FEATURES

- ⊕ Duress Alarm (also known as a silent alarm). If the safe operator is being asked to open the safe by a criminal he may trigger an alarm that alerts authorities without alerting the criminal (requires an alarm box and connection to an alarm system).
- ⊕ Can be programmed for time delay. In this way, in a holdup situation the lock will only open after a pre determined delay. This gives the criminal the option to wait (usually long enough for the authorities to arrive) or flee the scene without the contents of the safe.
- ⊕ A time delay override code can be programmed to allow immediate access for authorised users such as cash carriers.
- ⊕ Dual combination feature allows one trillion possible permutations giving even greater security.
- ⊕ Enables up to 9 users.
- ⊕ The Control code has the ability to delete a lost or unknown manager code and add a new manager code keeping the lock in operation
- ⊕ 480-event audit trail with time a date stamp. This guards against internal theft as the safe owner is aware of who and when someone has accessed the safe.
- ⊕ May be opened using combination only or combination AND Dallas key. The Dallas key provides double security for sites where shoulder surfing is a problem or when added security is required. It also eradicated code sharing increasing the validity of the audit trail.
- ⊕ Easy to program the lock with simple point and click software.
- ⊕ The audit trail can be downloaded by connecting a standard laptop, using the Dallas key port on the side of the pad and the simple point and click software.
- ⊕ Allows the user to shut the lock down from a remote location so no users can enter. This function may be used in an emergency situation or simply to shut down the safe overnight (requires an alarm box and connection to an alarm system).
- ⊕ Internal bolt sensor allows the bolt to be retracted only once per opening. The audit trail reports details of all openings & closings.
